

Inline numbered footnote

This sentence ends with a numbered footnote marker.¹

1: This note is collected into the bottom-right stack.

Two inline footnotes

The first point gets one note.¹ The second point gets another.²

- 1:** Footnotes are numbered in order of appearance on the slide.
- 2:** Each marker links down to the corresponding note.

Left-side inline footnotes

When the right side is busy, move the notes left.¹ You can still keep the marker inline where the sentence needs it.²

1: This is helpful when the right footer already holds a logo or a dense citation.

2: The bottom note block stays left-aligned.

Footnote and citation together

This slide has a regular citation and an inline numbered footnote.¹

Christiano et al., 2017

1: Citations stay above the footnote stack when they share a side.

Unnumbered floating footnote

Use this when you want a quiet caveat or speaker-side context, but you do not want a numbered marker in the main text.

This is a plain floating slide note with no inline marker in the body.

Unnumbered floating footnote on the left

This version behaves like `cite` vs `cite-right` : no inline marker, just a footer note on the chosen side.

This is the same unnumbered floating note pattern, but pinned to the left side.
