

Centered Hero

CLASSIC TITLE

A centered, high-ceremony opener for talks with short metadata.

Building Language Models in the Era of Agents

TITLE LEFT

Nathan Lambert

Amazon AGI, Seattle WA

18 February 2026

Uses width more intelligently than the centered hero and keeps supporting details in a clean vertical stack.

An Introduction to Reinforcement Learning from Human Feedback and Post-training

TITLE SIDEBAR

Nathan Lambert

rlhfbook.com

SALA 2026, Quito

11 March 2026

Best when the title is long
and you want the byline to
feel anchored rather than
dropped underneath.

Post-Training for Useful Language Models

TITLE BANNER

Nathan Lambert

Research talk

Spring 2026

A stronger editorial feel: big headline near the top,
metadata and framing copy collected near the bottom.

When To Use Which

- `title` : best for short titles and minimal metadata
- `title-left` : strongest default for research talks
- `title-sidebar` : safest option for long titles
- `title-banner` : useful when you want atmosphere without adding images

This example uses only built-in layouts plus the built-in title utility classes, so it should be directly copyable into another deck.
